Biocompost role in sewage management in Najafabad, Tiran and Karvan town

S. R. Daniali [1] and F. Mohamadi Aydoghmishi [2]
1. M.Sc of Department of Environment, Director in Najafabad, Tiran and Karvan Towns
2. B.S. of Department of Environment, Director in Najafabad, Tiran and Karvan Towns

Everyday we read or hear about contamination in newspapers, magazines and media. In regard to urban development and daily increase of population, the wastes and sewages of human life is also increasing, if we don't reach to a wise solution, garbage's will embrace all the world. One solution in decreasing urban sewage is eretion and exploitation of Biocompost .This action will help producing organic fertilizer in a situation adapted with hygienic-environmental standards which will lead to healthy human civilization and Natural environment. Najaf abad, Tiran and Karvan Towns have specific characteristics from Natural point of view in which human unwise interference had lead to irretrievable changes in Natural and beautiful face of these areas. In this article we have tried to point to adequate solution in leading economical, environmental and social goals of Biocompost with regard to researches of year 1384 and role of Najafabad biocompost factory in management of urban sewage of mentioned towns. Putting into work and action of biocompost factory will solve most of these problems.

Keywords: Biocompost, Sewage, Pollution and Najaf-abad, Tiran and Karvan Towns
